Dear Hiring Manager,

I am writing to express my interest in a Senior Backend Developer position at your company. With over 12 years of experience in software development — the last decade focused on Ruby on Rails — I have delivered web and cloud products for companies in Brazil, Portugal, Germany and the USA, and I believe my background is a strong match for your team.

In my current role at Bryj, I kicked off the backend architecture of Beam Studio, a product that turns websites into iOS/Android mobile apps in minutes, and replaced Bitrise with GitHub Actions pipelines for mobile builds, reducing company costs. Previously, I contributed to the development of a Web3 platform of licensed sports digital collectibles at RealFevr, developed financial transaction features for the US fintech iCapital, and worked on products for the German group Voith and the Portuguese healthcare company Glinnt — always in international, distributed teams with daily meetings in English.

My core strengths include relational databases (PostgreSQL, MySQL), designing and consuming RESTful APIs, and the full software development life cycle in both monolithic and microservice architectures. I am an advocate of best practices: tested, maintainable code with RSpec/TDD, Docker and CI/CD pipelines. I am also an active open source contributor, with projects such as Central CM42, Ruby Marks and Ruby for Good's Diaper app.

I am comfortable working autonomously as well as in agile teams (Scrum/Kanban), and I am used to taking ownership of features from conception to deployment and maintenance. I would welcome the opportunity to discuss how my experience can contribute to your team's goals.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

Rodrigo Luis Virgilio da Silva
